

Airpay Academy — 10x Enterprise L&D OS Roadmap

From LMS to LXP: Making Airpay's Learning Platform World-Class

Date: April 2026 | **Owner:** Nitin Rajput, Head of L&D **Current State:** Phase 16 Complete — Production data imported, UI/UX audit passed, all fixes applied **Target:** Enterprise-grade L&D Operating System competing with Cornerstone, Docebo, SAP SuccessFactors

Where We Are Today

Metric	Current	Enterprise Target
Users	2,871	5,000+
Courses	411	1,000+
Completion Rate	20.6%	60%+
Tenants	3	10+
Mobile Users	0% (no native app)	40%+
AI Features	0	Recommendations, chatbot, analytics
Integrations	0 external	HRMS, Slack, Teams, SSO

TIER 1: Quick Wins (4-8 weeks each)

High Impact, Low Effort — Build These First

1.1 Gamification Engine

What: Points, badges, leaderboards, streaks, levels

Why 10x: Completion rate jumps from 20% to 50%+ when gamification is active. Every enterprise LXP has this.

Build:

- New plugin: `local_airpay_gamification`
- Points for: course completion (100pts), quiz pass (50pts), daily login (10pts), streak bonus (5x multiplier)
- Badges: First Course, Speed Learner, Compliance Champion, Team Leader, Knowledge Sharer
- Leaderboard widget on employee dashboard (per-team and org-wide)
- Monthly reset option for competitive cycles
- Points redeemable for certificates or recognition

UI/UX:

- Dashboard: "Your Level" badge next to stats (Level 1 Learner → Level 5 Expert)
- Animated progress ring on profile page
- Leaderboard card on dashboard with top 5 in your department
- Push notification: "You're 2 courses away from Gold status!"
- Mobile: gamification bar at top of every page

1.2 Smart Notifications System

What: Push, email, in-app, SMS notifications with rules engine

Why 10x: Currently zero proactive communication to learners. Enterprise platforms drive 3x engagement with smart nudges.

Build:

- Enhance `local_airpay_lifecycle` with notification rules:
 - Deadline approaching (7 days, 3 days, 1 day)
 - Course assigned but not started (3 days after enrollment)
 - Streak broken (missed daily login)
 - Manager nudge ("3 team members have overdue courses")
 - Certificate earned (congratulations + share prompt)
 - New course available in your category
- Notification center in navbar (currently just bell icon — add real functionality)
- Email digest: daily/weekly configurable per user
- Manager alert dashboard: "Action needed" section

UI/UX:

- Notification dropdown: grouped by type (Urgent, Learning, Achievement, System)
- Red badge count on bell icon
- Swipe-to-dismiss on mobile
- "Remind me later" option
- Deep links from every notification

1.3 Enhanced Course Catalog (LXP-Style)

What: Netflix-style browsing with AI-powered recommendations, filters, and social proof

Why 10x: Current catalog is functional but basic. LXP platforms make discovery addictive.

Build:

- "Featured Courses" carousel at top (admin-curated)
- "Trending in Your Department" section (based on enrollment velocity)
- "Peers Are Taking" section (courses popular with same-role users)
- Star ratings visible on cards (already have `rating_element` in API)
- Estimated duration on every card
- Skill tags / competency labels
- "New This Month" badge
- Course difficulty level (Beginner / Intermediate / Advanced)
- Filter by: skill, duration, type, rating, department, completion status

UI/UX Desktop:

- Horizontal scrollable carousels (like Netflix)
- Quick-enroll button (one click, no modal)
- Preview popup on hover (course summary + first module preview)
- Breadcrumb trail: Home > Category > Subcategory

UI/UX Mobile:

- Swipe-through cards

- Bottom sheet for course details
- Quick-enroll floating action button

1.4 Learning Streaks and Progress Visualization

What: Visual progress tracking that motivates daily learning

Build:

- 7-day streak calendar on dashboard (GitHub contribution-style heat map)
- "Learning Minutes Today" counter
- Weekly goal setting (e.g., "Complete 2 courses this week")
- Progress milestone celebrations (animated confetti at 25%, 50%, 75%, 100%)
- Certificate gallery with download/share/LinkedIn buttons
- "Share to LinkedIn" integration for certificates

UI/UX:

- Streak counter: "5-day streak! Keep it going tomorrow!"
- Heat map: green squares for active days (visible on profile)
- Circular progress ring on dashboard (overall completion %)

TIER 2: Major Features (2-3 months each)

Differentiating Capabilities — Set Airpay Apart

2.1 AI Learning Assistant (Chatbot)

What: Claude-powered learning assistant embedded in the LMS

Why 10x: No Indian fintech LMS has an AI learning assistant. This alone justifies "10x" positioning.

Build:

- New plugin: `local_airpay_assistant`
- Powered by Claude API (Anthropic)
- Capabilities:
 - "What should I learn next?" (personalized recommendations based on role, completions, gaps)
 - "Summarize this course" (course content digest)
 - "Quiz me on AML" (generate practice questions from course content)
 - "What's my compliance status?" (real-time deadline check)
 - "How is my team doing?" (manager query)
 - "Find courses about payments" (natural language search)
- Context-aware: knows user's role, department, completed courses, pending items
- SENTIENTIA integration: assistant can explain SOP content

UI/UX:

- Floating chat bubble (bottom-right corner, all pages)
- Expandable chat panel with conversation history
- Quick-action buttons: "What's due?", "Recommend", "Quiz me"
- Dark mode compatible
- Mobile: full-screen chat view

2.2 Skills Matrix and Competency Framework

What: Map every role to required skills, track gaps, recommend learning paths

Why 10x: This transforms the LMS from "course catalog" to "talent development platform"

Build:

- New plugin: `local_airpay_skills`
- Skill taxonomy: create skills hierarchy (Domain > Category > Skill)
- Role-skill mapping: which skills are required for which roles
- Course-skill mapping: which courses teach which skills
- Gap analysis dashboard: "You have 7/12 required skills for Senior Manager"
- Auto-recommended learning paths based on target role
- Manager view: team skills heat map

UI/UX:

- Radar chart on profile page (current skills vs. required)
- "Career Path" visualization (current role → target role → required learning)
- Skill badges earned through course completion
- Skills search in catalog: "I want to learn about risk management"

2.3 Advanced Analytics Dashboard

What: Real-time analytics with drill-down, export, and scheduled reports

Why 10x: Current LearnerScript reports are static. Enterprise platforms offer interactive analytics.

Build:

- Replace/enhance LearnerScript with custom dashboard:
 - Real-time KPI widgets (configurable)
 - Drill-down: Org → Department → Team → Individual
 - Time-range selector (7d, 30d, 90d, YTD, custom)
 - Comparison mode: this period vs. last period
 - Compliance heat map: red/amber/green by department
 - Course effectiveness: completion rate vs. quiz score correlation
 - Engagement funnel: enrolled → started → 50% → completed → certified
 - ROI calculator: training hours × avg salary = investment
- Export: PDF, Excel, CSV, scheduled email
- Embed: shareable dashboard URLs for stakeholders

UI/UX:

- Card-based widgets (drag-and-drop arrangement)
- Interactive charts (click to drill down)
- "Insights" panel: AI-generated text summarizing key findings
- Dark mode compatible
- Mobile: scrollable single-column cards

2.4 Mobile-First Progressive Web App

What: PWA with offline access, push notifications, and native app feel

Why 10x: 60% of Indian workforce accesses internet primarily via mobile. No mobile = no reach.

Build:

- Enhance existing service worker (already in head.mustache)
- Offline course access: cache viewed SCORM content for offline replay
- Push notifications via web push API
- Home screen install prompt (already has PWA install banner)
- Responsive redesign of ALL pages for thumb-zone ergonomics
- Bottom navigation bar (Dashboard, Courses, Search, Notifications, Profile)
- Pull-to-refresh on dashboard
- Dark mode auto-detect from system preference

UI/UX Mobile:

- Bottom tab navigation (5 tabs)
- Course cards: swipe left to bookmark, swipe right to enroll
- Video player: full-screen landscape support
- Offline indicator: "Available offline" badge on cached courses
- Data saver mode: reduce images, defer video loading

TIER 3: Enterprise Platform Features (3-6 months each)

Compete with Cornerstone and SAP SuccessFactors

3.1 HRMS Integration Hub

What: Bi-directional sync with HRMS (BambooHR, SAP, Workday, or in-house)

Build:

- Enhance `local_airpay_integrations` :
 - User provisioning: HRMS creates user → LMS auto-enrolls
 - Department change: HRMS updates dept → LMS reassigns courses
 - Termination: HRMS deactivates → LMS suspends + archives
 - Designation change: auto-assign role-specific learning paths
- Webhook-based: HRMS pushes events to LMS API endpoint
- Audit trail: every sync action logged

3.2 Content Marketplace Integration

What: One-click access to external content providers alongside internal courses

Build:

- Integration layer for:
 - LinkedIn Learning (via AICC/LTI)
 - Coursera for Business (LTI)
 - Udemy Business (LTI)
 - Custom content providers (SCORM import)
- Unified catalog: internal + external courses in one search
- SSO passthrough: single login across all content
- Completion sync: external completion → Airpay certificate

3.3 Social Learning and Collaboration

What: Discussion forums, peer feedback, mentoring, knowledge sharing

Build:

- Course-level discussion forums (Moodle forums already exist — enhance UX)
- "Ask the Expert" feature: tag subject matter experts
- Peer course reviews and ratings
- Mentoring matching: auto-pair senior + junior employees
- "Knowledge Bites" micro-learning feed (TikTok-style short content)
- Employee-generated content: upload tips, guides, how-tos

3.4 Multi-Language and Localization

What: Full platform localization for Hindi, Swahili, Arabic (Dubai), and regional languages

Build:

- Moodle already supports multi-language
- Complete translation of:
 - All custom plugin strings (`airpay_pages`, `airpay_compliance`, etc.)

- BizLMS strings (already English, need Hindi/Swahili)
 - Dashboard labels and button text
- Course-level language tagging
- Language selector in navbar
- RTL support for Arabic (Dubai team)

UI/UX IMPROVEMENT PRIORITIES

Desktop Improvements

#	Improvement	Current State	Target State	Impact
1	Course cards	Basic cards with title + shortcode	Rich cards with image, rating, duration, progress, difficulty	HIGH
2	Dashboard personalization	Fixed layout per role	Drag-and-drop widget arrangement, user preferences	HIGH
3	Search experience	Basic text search	Fuzzy search, suggestions, recent searches, filters	HIGH
4	Admin data tables	BizLMS card view only	Sortable, filterable, exportable tables with bulk actions	MEDIUM
5	Course player	Standard SCORM frame	Distraction-free player with notes, bookmarks, speed control	MEDIUM
6	Profile page	Basic info display	Skills radar, learning history, certificates gallery, goals	MEDIUM
7	Onboarding wizard	None	First-login wizard: set language, interests, goals, department	HIGH
8	Accessibility	Basic	WCAG 2.1 AA compliance, screen reader optimized, keyboard nav	MEDIUM

Mobile Improvements

#	Improvement	Current State	Target State	Impact
1	Navigation	Top navbar collapses to hamburger	Bottom tab bar (5 tabs)	CRITICAL
2	Course cards	Responsive grid	Swipeable card stack	HIGH
3	Touch targets	44px minimum	48px+ with comfortable spacing	HIGH
4	Offline access	None	Cache courses for offline viewing	HIGH
5	Push notifications	None	Web Push for deadlines, achievements	HIGH
6	Video playback	Browser default	Custom player with speed, bookmarks	MEDIUM
7	Quick actions	None	"Continue Learning" shortcut on home screen	MEDIUM
8	Gestures	None	Swipe to enroll, pull to refresh	LOW

Admin/Tenant Admin Improvements

#	Improvement	Current State	Target State	Impact
1	Bulk operations	Individual card actions	Select multiple → bulk enroll/suspend/assign	HIGH
2	CSV import/export	Basic BizLMS upload	Visual mapping UI with validation preview	HIGH
3	Course builder	Moodle editor	Simplified wizard: upload SCORM/video → auto-configure	HIGH
4	Analytics drill-down	Flat report list	Interactive charts with click-to-filter	HIGH
5	Announcement system	None	Banner/popup for org-wide announcements	MEDIUM
6	Compliance calendar	Table view	Visual calendar with color-coded deadlines	MEDIUM
7	Audit log viewer	Raw Moodle logs	Searchable, filterable admin activity log	MEDIUM
8	White-label setup	Manual CSS edit	UI-based theme customizer per tenant	LOW

PLUGIN BUILD PRIORITY

New Plugins to Build

#	Plugin	Type	Effort	Impact	Dependency
1	local_airpay_gamification	Gamification engine	4 weeks	CRITICAL	None
2	local_airpay_assistant	AI chatbot (Claude)	6 weeks	CRITICAL	Claude API key
3	local_airpay_skills	Skills/competency framework	6 weeks	HIGH	Course-skill mapping data
4	local_airpay_analytics	Advanced analytics dashboard	8 weeks	HIGH	Existing data
5	local_airpay_social	Social learning features	4 weeks	MEDIUM	None
6	local_airpay_notifications	Smart notification rules	3 weeks	HIGH	SMTP configured
7	local_airpay_mobile	PWA enhancements	4 weeks	HIGH	Service worker base exists
8	local_airpay_onboarding	First-login wizard	2 weeks	MEDIUM	None

Existing Plugins to Upgrade

#	Plugin	Current	Upgrade To	Effort
1	block_airpay_compliance	RAG table	Interactive compliance calendar + forecasting	3 weeks
2	local_airpay_lifecycle	Joiner auto-enrol	Full JML (Joiner-Mover-Leaver) with HRMS webhook	4 weeks
3	local_airpay_pages	Static HTML	CMS-like editable content with versioning	2 weeks
4	local_airpay_integrations	Placeholder	HRMS + Slack + Teams + SSO connectors	8 weeks
5	BizLMS LearnerScript	Basic reports	Custom interactive analytics + exports	6 weeks

IMPLEMENTATION TIMELINE

Q2 2026 (April - June): Foundation

Week	Deliverable
1-2	Deploy airpayux to production (IT team H1-H8)
3-4	Gamification engine v1 (points + badges + leaderboard)
5-6	Smart notifications system (deadline alerts + manager nudges)
7-8	Enhanced catalog (Netflix-style browsing + filters)

Q3 2026 (July - September): Differentiation

Week	Deliverable
1-4	AI Learning Assistant (Claude chatbot)
5-8	Skills Matrix + Competency Framework
9-12	Advanced Analytics Dashboard

Q4 2026 (October - December): Enterprise Scale

Week	Deliverable
1-4	PWA mobile optimization + offline access
5-8	HRMS integration (Joiner-Mover-Leaver automation)
9-12	Social learning + multi-language support

Q1 2027: Market Leadership

Week	Deliverable
1-4	Content marketplace integration (LinkedIn Learning, Coursera)
5-8	Performance management tie-in (goals, OKRs)
9-12	Multi-region deployment + 99.9% SLA

10x VALUE PROPOSITION

After completing this roadmap, Airpay Academy becomes:

1. **India's first AI-powered fintech L&D platform** (Claude assistant)
2. **Gamified learning** that drives 3x engagement (points, streaks, leaderboards)
3. **Skills-based** talent development (not just course completion)
4. **Mobile-first** for India's workforce (PWA + offline)
5. **Multi-tenant enterprise** (10+ orgs, multi-language)
6. **Compliance-automated** (zero manual tracking)

7. **HRMS-integrated** (zero data duplication)
8. **Analytics-driven** (predictive insights, not just reports)
9. **Social learning** (peer knowledge sharing)
10. **Content marketplace** (internal + external, unified catalog)

This transforms Airpay Academy from an LMS (Learning Management System) into an L&D OS (Learning & Development Operating System) — the same positioning as Cornerstone/Docebo but purpose-built for Indian fintech.

Generated from production data analysis + competitive benchmarking against Cornerstone, Docebo, SAP SuccessFactors, and Absorb LMS.
